ABSTRACT

In November 1996, the Los Rios Community College District (LRCCD) conducted a study of the enrollment, success, and persistence of area high school graduates at the three District colleges: American River College (ARC), Cosumnes River College (CRC), and Sacramento City College (SCC). The cohort for the study included students enrolled at District colleges in fall 1995 who were 19 years of age or younger and who had graduated from high school in 1995. Results of the study, based on an analysis of 4,895 high school graduates, included the following: (1) the average number of units attempted by the high school graduates districtwide was 9.69, while the average number of units completed was 6.47; (2) 69.1% of the 1995 high school graduates attending LRCCD colleges persisted to spring 1996; (3) at ARC, the average high school graduate attempted 10.64 units and completed 7.05, compared to 10.59 attempted and 6.98 completed at CRC and 8.4 attempted and 5.7 completed at SCC; (4) 75.9% of all 1995 high school graduates who attended ARC in the fall persisted to spring 1996, while 75.7% of those at CRC and 61.3% of those at SCC did so; and (5) between fall and spring 1995, high school graduates' grade point averages districtwide improved from 2.39 to 2.47. The bulk of the report consists of data tables providing outcomes by feeder higher school. (HAA)

1995 HIGH SCHOOL GRADUATES IN
LOS RIOS COMMUNITY COLLEGE DISTRICT**

EXECUTIVE SUMMARY

November 1996

This is the first in a series of Los Rios Community College District (LRCCD) reports, profiling the enrollment and success of high school graduates of the Greater Sacramento Metropolitan Area who attend Los Rios colleges. This executive summary to the full report provides the District and its colleges – American River College (ARC), Cosumnes River College (CRC) and Sacramento City College (SCC) – with data on students who graduated from LRCCD's top ten feeder high schools in the Sacramento area. It summarizes their academic success during the Fall 1995 semester, their rate of persistence to the Spring 1996 semester, and their academic success during the Spring semester — important information for successful planning to meet the needs of new students.

Also available is the full report which includes data for *all* feeder high schools in the Greater Sacramento Metropolitan Area, in addition to the top ten feeder high schools reported here. All data are generated by high school of attendance. Aggregate data by college and district are provided for comparative purposes. The full report will be updated when data on the persistence and academic success of this cohort in Fall 1996 are available.

The cohort for this study includes students enrolled at Los Rios colleges in Fall 1995 who are 19 years of age or younger and who graduated from high school in 1995. Queries run on the LRCCD research database for this analysis were designed to capture not only students who graduated from high school in 1995 and never before enrolled at any college, but *all* 1995 high school graduates enrolled at Los Rios colleges in Fall 1995. The numbers therefore include 1995 high school graduates who were: special admits at Los Rios colleges from area high schools prior to Fall 1995, students who were special admits at *other* two year and four year institutions of higher education prior to Fall 1995, those who are concurrently enrolled at Los Rios colleges *and* other institutions of higher education, and new students who never before enrolled at any college.

LRCCD COMPOSITE

The top ten feeder high schools to the three Los Rios colleges in Fall 1995 were Elk Grove, Kennedy, Florin, McClatchy, Del Campo, El Camino, Valley, Sacramento City Unified, Johnson (Main Campus), and Cordova high schools. 1995 high school graduates from these ten schools make up

31.7% of all high school graduates enrolled in Fall 1995.

For nine of these ten high schools, one-third or more of the high school graduates attended a Los Rios college in Fall 1995, and for eight of the nine over 40% did. The exception to this is the 22.5% of Johnson High School (Main Campus) graduates who

attended. However, 40.6% of the graduates from both the Main and West campuses of Johnson High School attended Los Rios colleges.

Many of the 1995 high school graduates are mid-load students (attempting 6 to 11.9 units) or full-time students (attempting 12.0 or more units). The average number of units attempted in the Fall was 9.69, while units completed averaged 6.47. All LRCCD freshmen averaged a 2.37 GPA, 68.3% were retained to the end of the semester and 61.1% were successful in completing their courses (earning grades of A, B, C or Credit).

Exactly 69.1% of the 1995 high school graduates attending Los Rios colleges persisted to Spring 1996. The average units attempted increased from 9.69 in the Fall to 11.30 in the Spring, while the average units completed increased from 6.47 to 7.66. Average GPAs also increased – from 2.37 to 2.44. Retention rates only increased by 1% and success rates, increased by 2%.

AMERICAN RIVER COLLEGE

The top ten feeder high schools to ARC in Fall 1995 were Del Campo, El Camino, Rio Americano, San Juan, Mira Loma, Foothill, Bella Vista, Cordova, Highlands and Casa Robles. 1995 high school graduates from these 10 schools make up 44.4% of all high school graduates enrolled at ARC in Fall 1995.

In the case of nine of these schools, 20% or more of the high school graduates attended ARC in Fall 1995. In the case of the college's top two feeder schools (Del Campo and El Camino), 38% of all high school graduates from each enrolled at ARC in Fall 1995.

The average high school graduate at ARC attempted and completed slightly more units than the District average in Fall 1995: 10.64 units attempted and 7.05 units completed.

Grades were also slightly higher at an average 2.42 GPA. Retention and success rates were very close to the overall District rates, at 69.4% and 61.0%, respectively.

Persistence of students to Spring 1996 was high. Exactly 75.9% of all 1995 high school graduates who attended ARC in the Fall persisted to Spring 1996. The top feeder schools had particularly high persistence rates; all were 72.9% or higher. The top four feeder schools had persistence rates above 80%: 81.2% of the Del Campo graduates persisted to Spring 1996; 87.1% of the El Camino graduates did; 82.9% of the Rio Americano students did; and 80.8% of the San Juan graduates did.

Average units attempted and completed by those who persisted to Spring 1996 increased slightly over the Fall level: from 10.64 to 11.52 units attempted and from 7.05 to 7.82 units completed. Average GPAs only increased by .01 and retention rates remained the same. Success rates, however, improved by 2%.

COSUMNES RIVER COLLEGE

The top ten feeder high schools to CRC in Fall 1995 were Elk Grove, Florin, Valley, Ponderosa, El Dorado, Oakridge, Kennedy, Folsom, Johnson (Main Campus), and Galt. 1995 high school graduates from these ten schools make up 62.8% of all high school graduates enrolled in Fall 1995 at CRC.

For five of these ten schools, 20% or more of the high school graduates attended CRC in Fall 1995. The top feeder high school was Elk Grove and 30% of all Elk Grove graduates attended CRC.

The average high school graduate who enrolled at CRC attempted and completed slightly more units than the District average: 10.59 units attempted and 6.98 units completed. Average GPA was also slightly higher at 2.24. Retention and success rates,

however, were slightly lower than the District average, by 1% and 2%, respectively.

1995 high school graduates who enrolled at CRC in the Fall persisted in fairly large numbers (75.7%) to Spring 1996. Five of the top feeder high schools had persistence rates that were over 80%. Graduates of Kennedy High School had a persistence rate of 97.6%, while graduates of the Main Campus of Johnson High School had a persistence rate of 93.3%. Persistence rates of Folsom High School students were the lowest among the top ten feeder schools at a rate of 56.4%. Likewise, the retention and success rates that previous Fall were lower than CRC's average, by 9% and 11%, respectively; CRC's average retention and success rates in Fall 1995 for all 1995 high school graduates were 67.1% and 59.1%, respectively.

Average units attempted increased slightly in the Spring over the Fall: from 10.59 to 11.86. Likewise, the number of units completed increased – from 6.98 to 8.09. Average GPAs also increased from 2.24 to 2.40. Lastly, retention and success rates also increased over the average levels of the Fall – by almost 3% and 4%, respectively.

SACRAMENTO CITY COLLEGE

The top ten feeder high schools to SCC in Fall 1995 were Kennedy, McClatchy, Sacramento City Unified, Florin, Johnson (Main Campus), River City, Valley, Davis, Elk Grove and Christian Brothers high schools. 1995 high school graduates from these ten schools make up 39.2% of all high school graduates enrolled at SCC in the Fall of 1995.

In the case of seven of these ten schools, 20% or more of the high school graduates attended SCC in Fall 1995. Slightly more than 36% of the high school graduates of Kennedy, McClatchy and Johnson (Main Campus) enrolled at SCC in the Fall.

The average high school graduate enrolling at SCC attempted and completed slightly fewer units than the District average, with 8.40 and 5.70, respectively. However, the average GPA was slightly higher (2.39), as were the retention rate (69.6%) and the success rate (62.5%).

The persistence rate to Spring 1996 of all 1995 high school graduates attending SCC was lower than the District average. Whereas 69.1% of all 1995 high school graduates attending Los Rios colleges persisted to Spring semester, 61.3% of SCC students did. Persistence from SCC's top ten feeder schools was, however, generally high. The top three feeder schools – Kennedy, McClatchy and Sacramento City Unified – had persistence rates of 88.7%, 88.1% and 92.7%, respectively. Five more of the top ten had rates of 70% or higher.

Average units attempted in the Spring increased substantially over Fall levels – from 8.40 to 10.83. Units completed and GPAs also improved – from an average 5.7 to 7.3 units completed and from an average 2.39 to 2.47 GPA.

SUMMARY REMARKS

Understanding how well students from area high schools perform is useful information to track over time. It gives staff at the Los Rios colleges important information to base the development or enhancement of support programs designed to help students who struggle academically upon entry into college. This information is also useful to high school personnel to gauge how well prepared their students are, on average, for community college course work.

One important support program implemented at all three colleges is the College Success course. The CRC and SCC version of this course is offered for three academic credits, while the ARC version is offered for two. The course includes topics such as: motivation and discipline, memory development, time

management, communication skills, career planning, study skills and techniques, question-asking skills, review of college resources and regulations, involvement in campus activities, goal-setting, learning styles, note-taking techniques, textbook reading, exam preparation and handling exam anxiety.

Research completed by SCC counselor Dr. Ed Stupka in 1993 suggested that after seven semesters, students who enrolled in the College Success course at SCC outperformed students from a control group who did not take the course. Although there was no significant difference in the grade point average of the two groups, the number of units completed by students taking the College Success course was significantly higher than those who did not, and the drop out rate for this group was significantly lower. Moreover, the results of this study are consistent with other research reviewing academic performance and persistence of students who complete College Success courses.

All outcome measures analyzed in this study (units attempted, units completed, average GPA, retention rate and success rate) were higher for 1995 high school graduates who completed a College Success course in Fall 1995 than the comparable measures for all high school graduates who began their studies at a Los Rios college in Fall 1995. These higher measures hold true for both the Fall and Spring semesters.

Almost 4% of 1995 high school graduates who attended Los Rios colleges in Fall 1995 completed a College Success course and 83.2% of these students persisted to Spring 1996, vs. the 69.1% persistence rate of all 1995 high school graduates who attended in the Fall. On average, a student completing this course was full-time (attempting 12.22 units) during the first semester. He or she completed an average 8.71 units and earned a GPA of 2.49. The Fall 1995 retention rate of 77.6% was 5% higher and the success rate of 70.4% was 6% higher for these

students than for all 1995 high school graduates who matriculated at a Los Rios College that Fall. Students taking the College Success course performed better academically in the Spring semester than they did in the Fall, attempting an average 12.53 units, completing 9.39 and earning an average 2.57 GPA. Spring 1996 retention and success rates for these students were 77.6% and 70.4%, respectively.

There were experimental controls that matched students on several more variables used in the previously cited Stupka study that were not used in the above comparisons between all 1995 high school graduates and those that chose to take a College Success course. Nonetheless, the higher averages reported on these 1995 graduates may serve as a replication of Stupka's findings and those of other researchers looking at the academic performance of students who complete a College Success course.

Los Rios college staff may wish to review the GPA, retention, success and persistence data on area high school graduates and encourage more students graduating in 1997 from schools with lower than average rates to take the College Success course next Fall. Finding ways to retain the students who choose a Los Rios college will serve the District well in enrollment management, and recent high school graduates who tend to take fuller unit loads are an important group to consider, since their academic goals are often long term in nature.

This report was written by Judith Beachler, Interim Manager. It is based on data generated by Minh Le, Systems Hardware and Software Performance Analyst from the LRCCD Research Database and from data generated from the Demographic Unit of the California State Department of Education Demographic database.

DEFINTIONS USED FOR THIS REPORT

Cohort of This Study

The cohort for this study includes students enrolled at Los Rios colleges in Fall 1995 who are 19 years of age or younger and who graduated from high school in 1995. Queries run on the LRCCD research database for this analysis were designed to capture not only students who graduated from high school in 1995 and never before enrolled at any college, but *all* 1995 high school graduates enrolled at Los Rios colleges in Fall 1995. The numbers therefore include 1995 high school graduates who were: special admits at Los Rios colleges from area high schools prior to Fall 1995, students who were special admits at *other* two year and four year institutions of higher education prior to Fall 1995, those who are concurrently enrolled at Los Rios colleges *and* other institutions of higher education, and new students who never before enrolled at any college.

Retention Rate

The percent of students retained in their courses (those earning grades A,B,C,D,CR, and I) out of total enrolled in courses (those earning grades A,B,C,D,F,CR,NC,W, and I). Invalid grades were eliminated from the analysis (grades: NGR – no grade of record; RD – Report Delayed; and I – Incomplete). This is one of two common definitions of retention endorsed for use by the California Community Colleges Research and Planning Group in order to make college and statewide comparisons.

Success Rate

The percent of students successful in their courses (those earning grades A,B,C, and CR) out of total enrolled in courses (those earning grades A,B,C,D,F,CR,NC,W, and I). Invalid grades were eliminated from the analysis (grades: NGR– no grade of record; RD – Report Delayed; and I – Incomplete). This is the common definition of success endorsed for use by the California Community Colleges Research and Planning Group in order to make college and statewide comparisons.

Persistence Rate

Percent of students enrolled in next term out of students enrolled in first term. This is the common definition of persistence endorsed for use by the California Community Colleges Research and Planning Group in order to make college and statewide comparisons.
